

■ TABLE OF CONTENTS

Acknowledgments	6
Preface	7
Table of contents	9
PART ONE: INTRODUCTION	
1. About this Manual	
1.A. What is the goal of this manual?	13
1.B. Why is this manual needed?	14
1.C. What is covered by this manual?	15
1.D. Who should use this manual?	16
2. What are Ecohydrology & Phytotechnology?	
2.A. What is ecohydrology?	17
2.B. What is phytotechnology?	21
2.C. Application of ecohydrology and phytotechnology for water resources management and sustainable development. UNESCO/UNEP Demonstration Project	25
3. Basic Concepts & Definitions	
3.A. Watershed	30
3.B. Climate	31
3.C. Hydrological cycle	32
3.D. Biogeochemical cycles	33
3.E. Landscape structure and vegetation cover	34
3.F. Streams and rivers	35
3.G. Lakes and reservoirs	36
3.H. Freshwater Biota	37
3.I. Estuarine and coastal areas	40
PART TWO: SURVEYS & ASSESSMENT: How to Assess & Quantify Specific Issues in Watersheds	
4. LANDSCAPES: Defining Critical Areas in Watersheds	
4.A. How urbanization and industries influence water quality	45
4.B. How to assess landscape impacts on water quality	49
4.C. How to assess soil contamination	56
5. LAND-WATER INTERACTIONS: How to Assess their Effectiveness	
5.A. Can ground water influence surface water quality	61
5.B. How to assess the efficiency of ecotones in nutrient removal	66
5.C. How to estimate effects of riparian areas and floodplains on water quality and quantity	71
6. STREAMS & RIVERS: Defining their Quality & Absorbing Capacity	
6.A. Bioassays - A tool to measure ecosystem quality	75
6.B. Fish communities - indicators of riverine degradation	79
6.C. Bacteria, fungi and microbial processes	90
7. LAKES & RESERVOIRS: Defining their Ecosystem Status	
7.A. What happens to phosphorus in a water body: Sedimentation	97
7.B. What happens to nitrogen in a water body: Denitrification	101
7.C. How to assess phytoplankton biomass?	106
7.D. Why are cyanobacterial blooms harmful	110
7.E. Assessment of zooplankton communities	116
7.F. Assessment of fish communities	121

8. ESTUARINE & COASTAL AREAS: How & What to Measure	
8.A. Water Chemistry	124
8.B. Water Circulation	128
8.C. Structure of Biota	131
PART THREE: MANAGEMENT: How to Prevent Degradation & Restore Watersheds	
9. LANDSCAPE MANAGEMENT: Regulating Pollution Exports & Hydrological Cycles	
9.A. Phytoremediation of soils	139
9.B. How to manage water cycles in watersheds	144
9.C. Control of diffuse pollutant inputs to water bodies	150
10. LAND-WATER INTERACTIONS: Reduction of Contamination Transport	
10.A. Constructed wetlands: How to combine sewage treatment with phytotechnology	154
10.B. Ecotones: How to diminish nutrient transport from landscapes	158
10.C. Floodplains and natural wetlands: Reduction of nutrient transport	163
11. MANAGEMENT OF STREAMS & RIVERS: How to Enhance Absorbing Capacity against Human Impacts	
11.A. Restoration of physical structure in a river	169
11.B. Restoration of vegetation: Increasing nutrient retention capacity and self-purification ability	175
11.C. Management of shoreline and riverbed structure: Increasing fish yields	180
11.D. Ecohydrological approach in pond aquaculture	184
12. RESERVOIR & LAKE MANAGEMENT: Improvement of Water Quality	
12.A. Ecohydrological methods of algal bloom control	188
12.B. How to manage biotic structure in a reservoir	194
12.C. Harvesting macrophytes and macroalgae	197
12.D. Other methods of water quality improvement	199
13. ESTUARINE & COASTAL AREAS: How to prevent degradation and restore	202
14. OTHER ASPECTS OF WATERSHED MANAGEMENT	
14.A. Socio-economic aspects of ecohydrology & phytotechnology applications in integrated watershed management (IWM)	209
14.B. Can global climate change affect management outcomes?	212
APPENDIX	
Appendix	219
Glossary of Terms	226
References	231
Contributing Authors	246
